

Payton Anderson

Tacoma, Washington | (253)-455-5359 | paytonoanderson03@gmail.com | [LinkedIn](#) | [Github](#) | [Portfolio Website](#)

PROFESSIONAL SUMMARY

Computer Science graduate with foundational experience in software development and programming. Independently designed and developed a full-stack web application using Next.js and Supabase, showcasing strong problem-solving and self-motivation. Skilled at troubleshooting software issues and applying analytical thinking to deliver effective solutions. Eager to leverage technical expertise and initiative to contribute to high-quality software projects.

EXPERIENCE

Web Development Intern | LangPal

Mar 2026 - Present

Tacoma, Washington

- Developing and maintaining web application features using HTML, JavaScript, and Supabase backend.
- Collaborating with the development team to build and improve user-facing features for a language learning platform.

Freelance Software Developer

Mar 2026 - Present

Tacoma, Washington

- Building full-stack web applications for clients using FastAPI backend, React frontend, and SQL Server database.
- Delivering end-to-end solutions across the full software development lifecycle, from requirements gathering to deployment.

EDUCATION

California Polytechnic State University

Sep 2021 - Jun 2025

B.S., Computer Science San Luis Obispo, California

- **GPA:** 3.4
- **Coursework:** Data Structures, Design & Analysis of Algorithms, Project Based Object Oriented Programming & Design, Intro to Software Engineering, Systems Programming, Intro to Database Systems, Programming languages, Intro to Operating Systems, User-Centered Interface Design/Development

SKILLS & COMPETENCIES

- **Skills:** Microsoft 365 certified
- **Programming:** Java, Python, C, JavaScript, TypeScript, HTML/CSS, SQL, Node.js, React.js, Next.js
- **Tools:** Bootstrap, Supabase, Vercel, Jupyter Notebooks, AWS, Git

PROJECTS

College Football Pool

Aug 2025 - Present

Tacoma, Washington

- Full stack web application with 30 users built with Next.js and Supabase and deployed on Vercel.
- Website for a college football pool that allows users to view and submit weekly picks online.
- Created automated jobs that update weekly games and results automating the whole process.

Malicious URL Predictor

May 2024 - Jun 2024

San Luis Obispo, California

- Trained deep learning models with TensorFlow to detect phishing links.
- Improved accuracy from the 98% achieved in the base paper to 98.5% accuracy.

Potion Shop Database System

Apr 2024 - Jun 2024

San Luis Obispo, California

- Designed and implemented a REST API in Python managing a simulated potion marketplace with concurrent transactions from customers, vendors, and bottlers.
- Built a relational database in Supabase handling inventory management, order processing, and ingredient tracking across multiple entities.
- Implemented transaction handling to ensure data consistency when processing simultaneous purchase requests, ingredient deliveries, and potion production cycles.
- Developed API endpoints to support the full business workflow: ingredient procurement from vendors, potion bottling requests, and customer purchases.
